

Benefits of the Virtual FISART project

- We intend to present the results of "VIRTUAL FISART" to the city of "Timisoara European Capital of Culture 2021" in order to contribute to its efforts to prepare this event in the current conditions of insecurity and limited funding;
- The main objectives of the Virtual FISART project is to deliver Street Art proposals and ideas for this great event;
- The participating artists get the chance to be in the front line of those to be involved in the Street Art component of the "Timisoara European Capital of Culture 2023" project;
- There is a good probability that the participating artists will be selected and contracted for the concrete realization of the virtual works presented in Virtual FISART project for the event Timisoara European Capital of Culture in 2023.
- The advantage of this project is that it does not require funds for travel, accommodation, food, materials, lifting equipment, approvals and other indirect costs, requiring only enthusiasm, talent and time to prepare and apply virtual works on available digital images of the walls;
- The participating artist, the communities and the organizations involved will have the possibility to use the Internet based promotion platform;
- Official Certificates of Participation will be handed out to all the artists and active partners involved;
- The presence of the Virtual Street Art Works on many available Internet based platforms will improve the visibility of the artists, their creations and all the cities and organizations involved.

Making of the Mural created for the Timisoara European Capital of Culture Project
